The National Couples’ Health and Time Study (NCHAT) questionnaire was designed to be gender-neutral and as inclusive as possible. In all items, we changed any reference to a spouse or partner to be “spouse/partner.” We also removed idioms and unnecessary words for clarity and brevity. Any modifications to validated questionnaires are noted in this documentation. This documentation is organized by content categories. To understand the flow of the NCHAT survey, please see our Wave 1 Questionnaire.

Elements included in the Codebook for each item/measure:

1. Variable name(s)
2. Measure name, citation (if applicable), and question text
3. Skip logic, if applicable
4. Notes, if applicable

Spouse/Partner Demographic Information

INTRO: Next, we will ask you about all members of your household who live there most of the time. We will use initials (first letter of their first name and first letter of their last name) to identify members of your household. If members of your household have the same initials, please use something different for each family member. You can use a nickname, numbers, initials – anything you would like to identify each family member. (AB, YZ, Person1, Person2, Kid)

Please complete the following questions for your current spouse/partner(s) who live(s) in your household most of the time. If you have more than one spouse/partner living in your household most of the time, you will be asked if you have another spouse/partner after you complete the series of questions for your first partner.

Note about HHR16

Appended Survey Material: After a preliminary review of the NCHAT data we noticed a high rate of missingness on reporting ages in HHR16. A supplemental survey was sent to respondents who reported a child type relationship (1-6) and were missing a reported age. These supplemental data have been appended to the end of the data set. The survey was modified to show an error message if child age was left blank to confirm that future refusals were intentional.

NCHAT_CHILD_RESEND SURVEY
